

瑞晶電子股份有限公司 Rexchip Electronics Corp.

Rexchip is awarded by the CTSP for its achievements in improving the safety and health of our employees.

Since the construction of Rexchip's first fabrication facility, the installations of environmental safety monitoring systems and natural disaster precautionary drills have safeguarded the safety and sanitation of the company. The maintaining of a safe and sanitary working environment has gained the approval of the CTSP and has earned Rexchip the "2008 Excellent Factory Award for Industrial Safety & Sanitation." Meanwhile, during the industrial safety & environmental protection month activities held by the CTSP (Central Taiwan Science Park Administration Bureau) in August 2009, Rexchip was awarded first & second place in the ERT (Emergency Response Team) competition, this is also the second year that Rexchip has taken first place in the ERT competition.

In fact, Rexchip has yearly emergency evacuation drills for all of its employees, quarterly ERT drills for its ERT members plus monthly emergency response procedure drills for all departments. Only through the above mentioned preparation and taking these drills seriously, was Rexchip able to earn first and second place in the ERT competition this year. As for environmental safety and sanitation management, Rexchip has set up many efficient monitoring systems, like environment & safety management systems, chemicals management systems and so on. The chemicals management system not only can preview new chemicals' potential risk but also provide complete information through the database for inquiry. We also follow the Plan-Do-Act-Check management circle to improve performance. Rexchip is honored with the "2008 Excellent Factory Award for Industrial Safety & Sanitation" and will keep stressing the improvement of the safety and health of our employees, pollution prevention, environmental friendliness, and green-manufacturing production as critical components of the company management.
